EXPERIMENT Title ADVACED SUB ARRAY PROBLEM Description LEGOT NO. 23-LEGOT NO. 23	001 KNB 23 EFF 0C
You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distance	e Épol File
from the basket and the player's position. The ball is shot N times, successfully. You are given an array A containing the	100
distance of a player from basket for N shots. The index of array represents the position of the player. Score is calculated by multiplying the position with the distance from the basket. Your task is to find and return an integer value representing the maximum possible score you can achieve by choosing a	У
Your task is to find and return an integer value, representing the maximum possible score you can achieve by choosing a contiguous subarray of size K from the given array.	KNB53EE
ূৰ্ত Note:	
Note: * A subarray is a contiguous part of array.	201
* Assume 1 based indexing.	seffoon)
* The array contains both negative and positive values. * Assume the player is standing on a cartesian plane.	
* Assume the player is standing on a cartesian plane.	10,478 ₅₅
Input Format	01
- input1:An integer value N representing the number of shots made by the player - input2: An integer K representing the size of subarray	
- input2 : An integer K representing the size of subarray	3EEEC
- input3 : An array of integers	,81
Sample Input 5	.3
	1.88, F2
2 1 2345
